

STYLEMate — An AI-Assisted Smart Styling & Digital Wardrobe Prototype

Project Team & Roles

Janvi Kumari – Project Leader & Research Lead

Raman – UI/UX & Frontend Lead

Harman – Backend Lead (Core API)

Tanish – Backend Lead (Database & Integration)

Samaira – AI & Recommendation Lead

Introduction

STYLEMate is an academic prototype that demonstrates how Artificial Intelligence can assist users in making everyday clothing and styling decisions. The project explores the integration of digital wardrobe systems with AI-based recommendations to enhance efficiency, personalization, and user confidence in dressing.

Problem Statement

People often struggle to decide what to wear for different occasions and weather conditions. Many individuals forget what clothes they already own, leading to repeated purchases and underutilized items. This results in wasted time, frustration, and inefficient wardrobe management.

Project Scope

This project is developed as an academic prototype and focuses on conceptual system design, UI mockups, AI logic, and workflow planning without full-scale deployment.

Tools & Technologies

Version Control & Collaboration: GitHub, MS Teams

Design: Figma, Draw.io

Backend Concepts: Python, FastAPI

Database Concepts: MongoDB / Firebase

AI Concepts: Recommendation systems, Computer Vision (conceptual)

Execution Plan

Week 1: Project setup and documentation

Week 2: UI/UX design and requirement analysis

Week 3–4: Backend and database design

Week 5: AI recommendation logic

Week 6–7: Integration (prototype) and testing

Week 8: Final report and presentation

Conclusion

STYLEMate highlights the use of AI in improving styling decisions and wardrobe management. As a prototype, it successfully demonstrates course concepts including system design, data management, and AI-based recommendations.
